

A GUIDE TO AUTOMATICALLY CREATING TRANSLATION TABLES

Making sheets for translation mods is not what you probably want to make, so here a program what will do it automatically (almost)

This script extracts:

1. Characters
 2. Enemies
 - 3.1 Abilities
 - 3.2 Abilities alt (for mods with different way adding abils)
 4. Items
 - 5.1 Achievements
 - 5.2 Secret achievement descriptions (rarely used)
 - 6.1 Text for all passives (raw feature)
 - 6.2 Id and name of passive what PROBABLY can be translated
- (Passives not always can be translated. Look up translation guide
<https://steamcommunity.com/sharedfiles/filedetails/?id=3625039313>)

Doesn't pull out:

Statuses, ui, passives in glossary

Note: this script replaces " with \!

this can be easily corrected later with an automatic search and replacement

1. FIND FILES

1.1 You need decompiled .dll file of mod what you want to translate. These files can be found in Steam Mods folder for Brutal Orchestra what named:

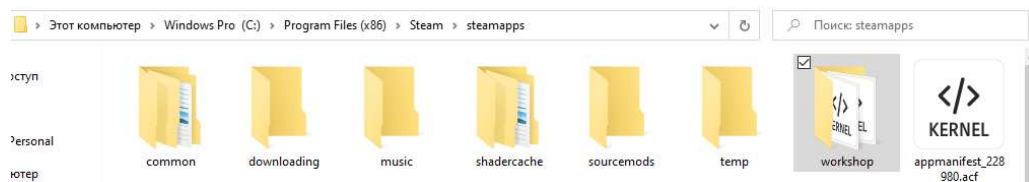

17 34 320

which should be located at this address:

C:\Program Files (x86)\Steam\steamapps\workshop\content\1734320

or

D:\SteamLibrary\steamapps\workshop\content\1734320

The folders for all the mods are there, and if you have a lot of them, you'll need to find the one you need by trial and error (you can check by image that included with each mod)

In the mod folder, go to the plugins and find the .dll file

2. *PREPARE THY FILES*

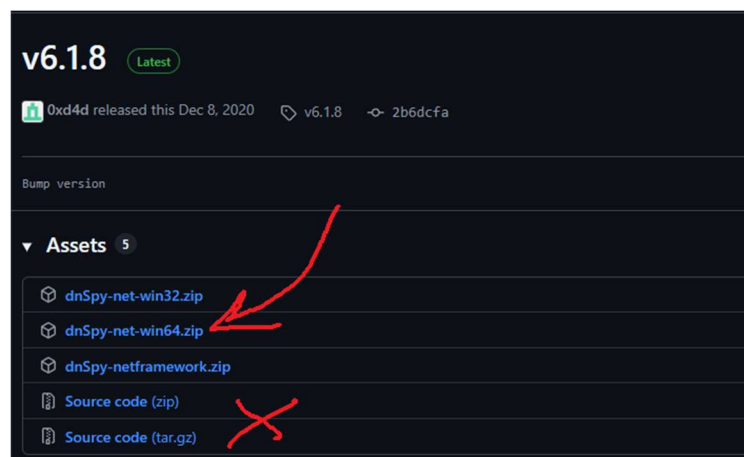

Now we need a descriptor that will allow us to view the entire project code and save it as .cs files

I use dnSpy for this

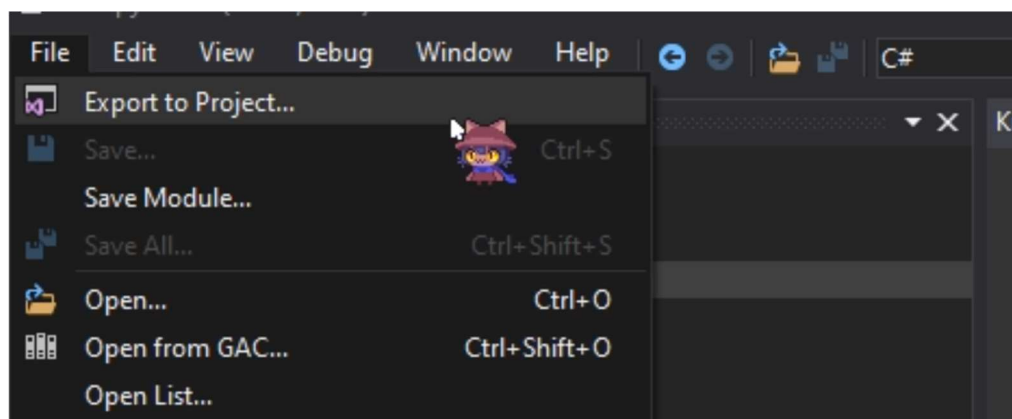

Download - <https://github.com/dnSpy/dnSpy/releases/tag/v6.1.8>

(You need to download the program, not the source code. It will be at the very bottom)

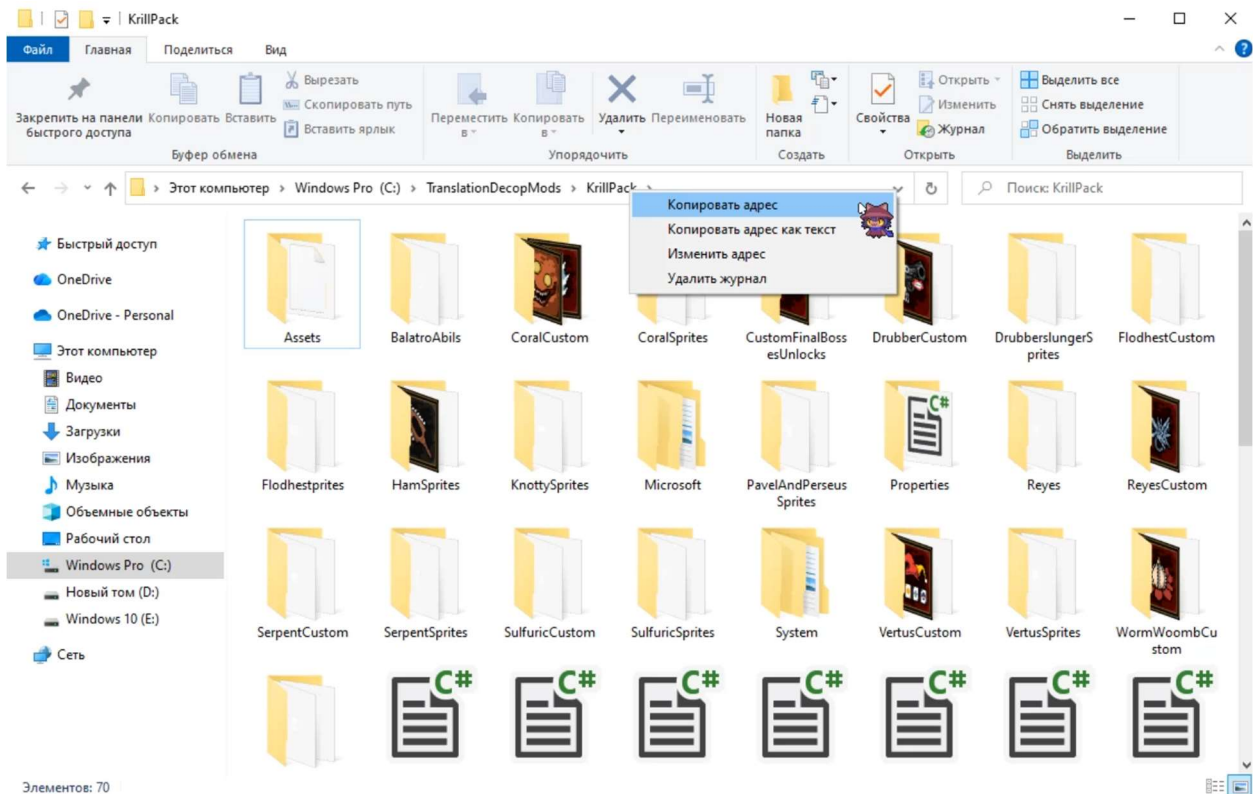

Open your file in the dnSpy and click “File” -> “Export to Project...” and choose where extracted files will be located (don't change the export settings, I have no idea what they do)

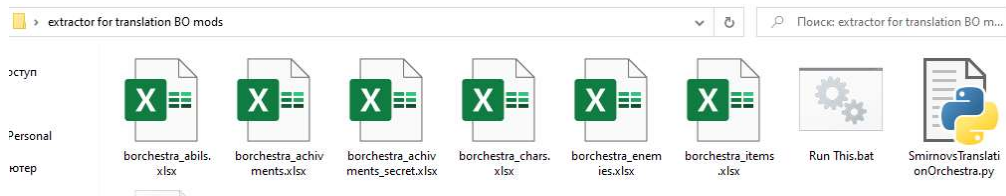

3. RUN MY VIRUS

Find your folder with extracted mod and copy way to it

Run "Run This" and paste copied way

Now in program folder will appear .xlsx files with extracted text

Afterwards: I don't know how to work in Python and all code is 90% written by Chat-gpt and Gemini so if you find any issues or want judge me, you can contact me in discord or telegram: @Nikit_www
